

Object Recognition using TensorFlow and Voice Assistant

Abstract:

Recent technological improvements have accelerated life because of enhanced developments. These developments that speed up living are the result of advanced automation and information technology. Nowadays, most homes have access to the online, which makes living more convenient. apps, mobile devices, and Recent technological improvements have accelerated life because of enhanced developments.

Accurate object recognition is vital for better computer vision. Machine learning and deep learning have enhanced object detection. This project creates an Android app merging object recognition with precise location for real-time accuracy.

Keywords: Apparatus, versatile, automation, proficient, machine learning, deep learning.
